

26 January 2020

All answers must be written to the sheet with puzzles. You can use additional sheets of paper, but the final answer should be written into the form.

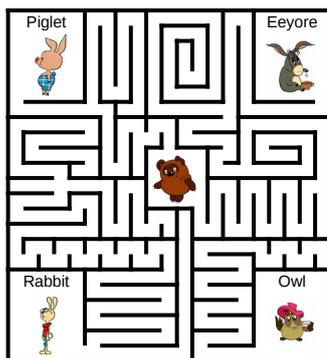

It's suggested to use pencil and rubber (if needed).

The number of points mentioned in a puzzle are given if the puzzle is solved fully and correctly. Partial solutions are not scored.

The puzzles 1-5 are aimed for all solvers, the puzzles 6-7 for solvers older than 8 years and the puzzle 8 only for solvers older than 10 years.

1. Going to Winnie the Pooh

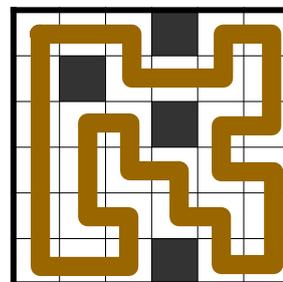

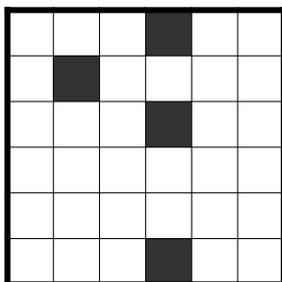

Which characters can reach Winnie the Pooh following the maze?

Piglet, Eeyore

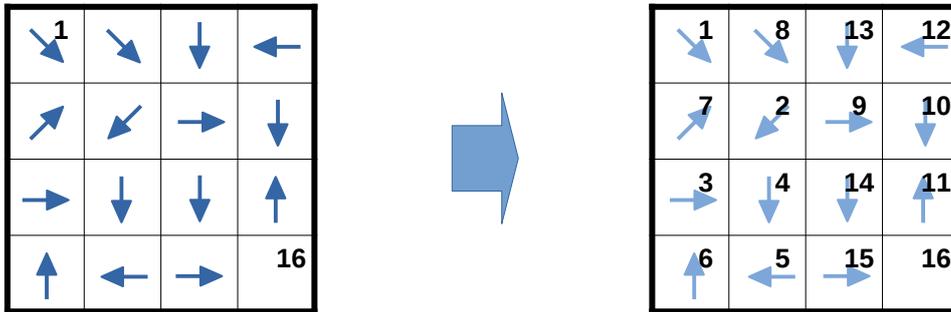

2. Simple loop

Draw a single closed loop which passes through all white cells exactly once. You can go vertically or horizontally from one cell to another, diagonal moves are not allowed.

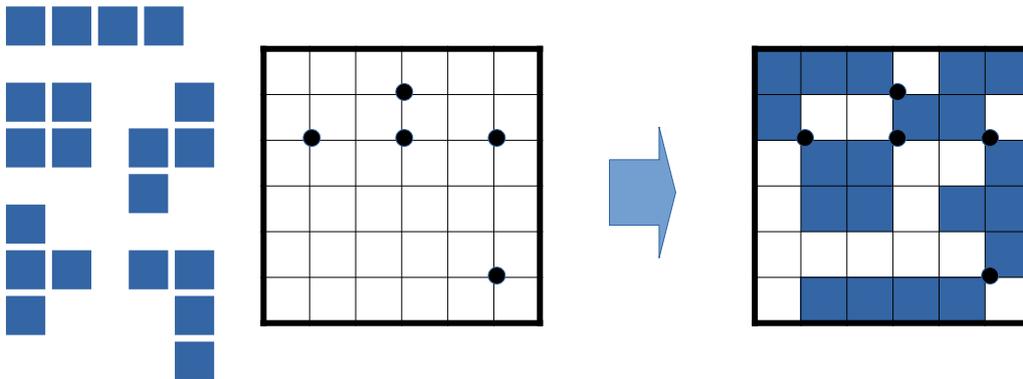

3. Grasshopper

Starting from the top left corner the grasshopper has to visit all cells exactly once and finish at the bottom right cell. From any cell the grasshopper can jump to any distance in the direction showed by the arrow.

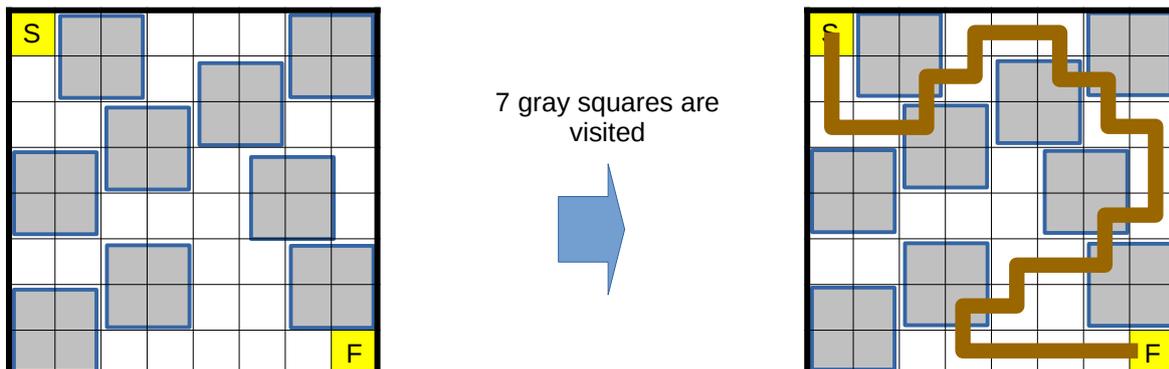

4. Touching points

Place all the given shapes into the grid. The shapes cannot overlap and have common segments of the edges. Touching by the corner is allowed. All points where two shapes touch each other are shown. The shapes can be rotated and mirrored.

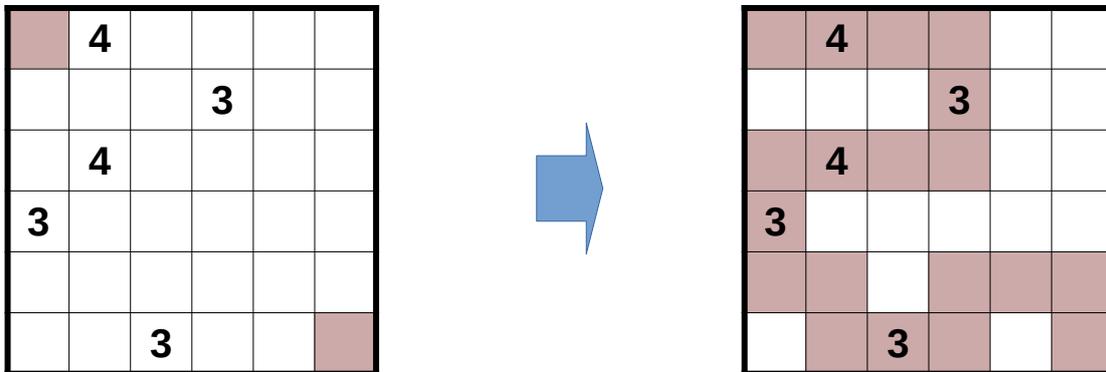

5. One cell

Draw a path from top the left to the bottom right corner. The path can go from one cell to another horizontally or vertically. Path can't visit any cell more than one time. Only one cell of any gray square can be visited. Try to visit as many gray square as possible.

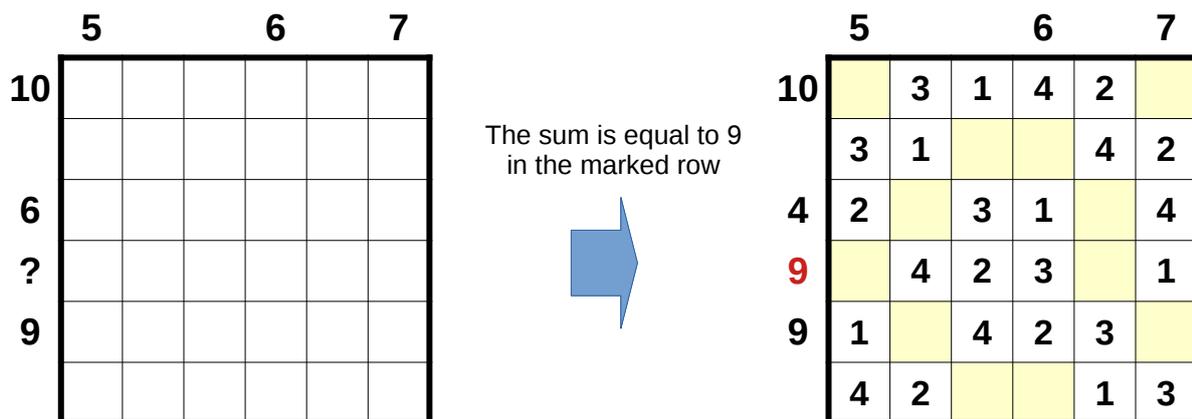

6. Passage

Draw a passage of one cell width which goes from the top left to the bottom right corner. The passage consists of horizontal and vertical segments and passes through all cells with digits. The passage can't turn in the cell with digit and the digit show the length of the corresponding segment. Passage cannot touch itself even by a single point.

7. Double block

Fill in some cells with digits from 1 to 4 (1 to 5 in bigger grid). Each row and column should contain every digit exactly once. No more than one digit per cell. Two cells in each row remain empty. Numbers outside the grid show the sum of digits between empty cells in the corresponding direction. Try to get the number at the place of the question mark as big as possible.

8. Railway

Draw a single closed loop formed by vertical and horizontal segments. The loop passes through all cells. All cells where the loop crosses itself are shown. All the other cells should be visited once. Cells with letters are the stations – the loop cannot turn in these cells. The given word should be read by following the loop.
